Passive PoE Adapter Kit

Power and data for your IP Camera via only one cable

DESCRIPTION

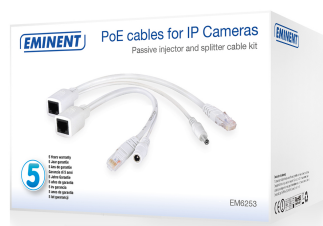

The Passive Power over Ethernet Injector + Splitter Adapter Kit is the ideal solution to supply your Easy Pro View IPCamera with power and data without adding an extra cable. The EM6253 is a set of 2 adapters which manage the power and data transfer over only ONE network cable. This very useful when you do not have a power socket near your IP camera. The PoE Injector combines power and data to ONE network cable. The PoE Splitter converts the signal back to power and data for your IP Camera.
